# M4A Audio Slideshows Guide

#### **The Enhanced Podcast Format: M4A**

An *enhanced podcast* is an audio file that can also display sequential images. Enhanced podcasts can additionally contain chapter markers with titles, which allows you to easily jump to specified points in the session. One of the great advantages of this format is it can be played on both PCs and Macs through iTunes, as well as on mobile devices such as the iPhone, iPod touch and iPad.

#### Importing into iTunes:

If you don't already have iTunes, go to **apple.com/itunes** to download and install it. Once installed, open iTunes. Go to the **File** menu and select **Add to Library...** 

Navigate to the location of the M4A file(s), which is either the CD-ROM or your download directory if you bought the download. Select the files you want to import and click **Open**. The M4A files will be imported into the Music section of your Library.

# Playing in iTunes:

Click the play button by the main title or double-click the item title to play the file.

At the top you will see the progress indicator appear, and to the left of that the **Item Artwork** thumbnail. To display the slideshow viewer, **command-click** (Mac) or **control-click** (Windows) on the item artwork thumbnail.

This window includes player controls and a **Chapter Menu**. The window is also resizeable, so you can make it bigger or smaller.

The **Chapter Menu** enables you to jump to sections of the session. To jump to a chapter, click on the **Chapter Menu icon** and select a chapter from the pop-up window.

# Moving Files to iOS Devices:

Currently, even though iOS supports M4As, there is no way to put them on the device using Apple's apps. So until that changes, there are third-party solutions. Here is our recommended solution using an app called Downcast, which you can download from the App Store here:

Once you have Downcast installed, connect your device to your computer. Select your device to see the device's summary screen. Then click the **Apps** tab and scroll down to the **File Sharing** section. Select **Downcast** in the list. In the bottom right, click the **Add...** button. In the Add dialog box, select the M4A files you want to import and then click the **Add** button.

You will see the files now listed in the Downcast Documents section. Click **Sync** to sync changes to your device.

After it's finished syncing, on your device open up Downcast. There won't be any items listed and that's ok, we have to import them first. Tap the **More** tab, then tap **Tools**, then tap the bottom option, **Import Media Files**.
